

Assignment 1

Flowchart And Java Code

1. Check Positive Number :

Flowchart:

Java Code:

```
import java.util.Scanner;

public class positiveNumber {
    public positiveNumber() {
    }

    public static void main(String[] var0) {
        Scanner var1 = new Scanner(System.in);
        System.out.println("Enter The number : ");
        int var2 = var1.nextInt();
        var1.close();
        if (var2 > 0) {
            System.out.println("Number Is Positive");
        } else {
            System.out.println("Number is not Positive");
        }
    }
}
```

Output:

```
Enter The number :
8
Number Is Positive
```

2. Check Negative Number :

Flowchart:

Java Code :

```
import java.util.Scanner;
public class negative
{
    Run | Debug
    public static void main(String [] args)
    {
        Scanner sc = new Scanner (System.in);
        System.out.println(x: "Enter The number : ");
        int num = sc.nextInt();
        sc.close();

        if(num<0)
        {
            System.out.println(x: "Number Is Negative");
        }
        else
        {
            System.out.println(x: "Number is not Negative");
        }
    }
}
```

Output:

```
Enter The number :
-21
Number Is Negative
```

3. Check Odd or Even Number:

Flowchart:

Java Code :

```
import java.util.Scanner;
public class evenOrOdd
{
    Run | Debug
    public static void main(String args [])
    {
        Scanner sc = new Scanner (System.in);
        System.out.println(x: "Enter The Number : ");
        int num = sc.nextInt();
        sc.close();

        if(num % 2 == 0)
        {
            System.out.println(x: "Number Is Even ");
        }
        else
        {
            System.out.println(x: "Number Is Odd ");
        }
    }
}
```

Output :

```
Enter The Number :
11
Number Is Odd
```

```
Enter The Number :
12
Number Is Even
```

4. Display Good Morning Message Based On Time:

Java Code:

```
import java.util.Scanner;
public class goodMorning
{
    Run | Debug
    public static void main(String args[])
    {
        Scanner sc = new Scanner(System.in);

        System.out.println(x: "Enter The Current Time : ");
        int time = sc.nextInt();

        sc.close();

        if(time > 5 && time < 12)
        {
            System.out.println(x: "Good Morning ");
        }
    }
}
```

Output:

```
Enter The Current Time :
7
Good Morning
```

5. Print Area Of Square:

Flowchart:

Java Code:

```
import java.util.Scanner;
public class areaOfSquare
{
    Run | Debug
    public static void main(String args[])
    {
        Scanner sc = new Scanner(System.in);
        System.out.println("Enter the Side Of Square : ");
        int side = sc.nextInt();
        sc.close();

        int area = side * side;

        System.out.println("Area Of Square Is : " +area);
    }
}
```

Output:

```
Enter the Side Of Square :
5
Area Of Square Is : 25
```

6. Print Area Of Rectangle:

Flowchart:

Java Code:

```
import java.util.Scanner;
public class areaOfrectangle
{
    Run | Debug
    public static void main(String args[])
    {
        Scanner sc = new Scanner(System.in);

        System.out.println(x: "Enter The Length Of Rectangle : ");
        int len = sc.nextInt();

        System.out.println(x: "Enter The Width Of Rectangle : ");
        int wid = sc.nextInt();

        sc.close();

        int area = len * wid;

        System.out.println("Area Of Rectangle Is : " +area);
    }
}
```

Output:

```
Enter The Length Of Rectangle :
5
Enter The Width Of Rectangle :
10
Area Of Rectangle Is : 50
```

7. Find The Largest Of Three Number:

Flowchart:

Java Code:

```
import java.util.Scanner;
public class largest
{
    Run | Debug
    public static void main(String args[])
    {
        Scanner sc = new Scanner(System.in);

        System.out.println(x: "Enter The First Number : ");
        int fir = sc.nextInt();

        System.out.println(x: "Enter The Second Number : ");
        int sec = sc.nextInt();

        System.out.println(x: "Enter The Third Number : ");
        int thr = sc.nextInt();
        sc.close();

        if(fir > sec && sec > thr)
        {
            System.out.println("First Number Is Largest : " +fir);
        }
        else if(thr > sec)
        {
            System.out.println("Third Number Is Largest : " +thr);
        }
        else
        {
            System.out.println("Second Number Is Largest : " +sec);
        }
    }
}
```

Output:

```
Enter The First Number :
10
Enter The Second Number :
20
Enter The Third Number :
30
Third Number Is Largest : 30
```
